

Exmoor Visitor Survey 2021

RESULTS

January 2022

Dan James Exmoor National Park Authority Between July and December 2021 the National Park Authority conducted a visitor survey to gain a greater understanding of visitor views and ascertain their thoughts on a range of tourism related issues. The survey followed up previous surveys of a similar nature conducted in 2005, and every two years from 2010. This survey was originally intended to run in 2020 but delayed 12months owing to Covid-19.

454 surveys were completed face to face with visitors. This sample size provides a confidence level of 95% with a margin of error (confidence interval) of 5%. In other words we can be 95% confident that the trends depicted in the survey are an accurate reflection of overall views within less than 5% either way.

Please note the results listed below refer to actual responses – if for some reason a particular question wasn't answered then this is not included. As a consequence where results have been split amongst categories (e.g. staying / day visitors or first time / repeat visitors) the breakdown may not always correlate with the total and the smaller sample sizes will lower the confidence levels.

The surveys were conducted at a range of locations within the National Park locations with larger samples taken at key towns and honey pots and smaller samples collected at more remote sites. This allowed us to reach visitors at both the main 'honey pot' locations but also in less visited areas of the National Park. Each survey was conducted face to face taking approximately 10 minutes.
